Hi Lee and Eric,

This all sounds great and, Lee, I'll hop on the link you shared at 10:30am PT tomorrow so we can get things setup. In terms of Plan B's, not too bad - looking forward to it!

Best,
Kristian

looking forward to it, and it is extremely timely. But please be absolutely honest about whether or not you would be able to give the talk via Teams (that's the overflow link we set up for your talk).

Please consider carefully, and then let me know. Your being present even remotely will be effective in my opinion, and hopefully we can reschedule you for a later time as well for a 'part II". However I do want to reiterate: if giving the talk remotely distracts you from your primary mission, please say no!

Will await your decision, and again (b)(6)
(b)(6)

Best,

Lee

Hi Lee and Eric,

I'm really sorry to do this, however, I have to cancel my travel as (b)(6)
(b)(6)

I'm happy to reschedule for a later day or, alternatively, give a talk via Zoom on Tuesday for the scheduled time - it won't be the same as me being there in person, but up to you what works best.

Again, I'm really sorry about this - I had been looking forward to the visit, so hopefully we can figure something out in the future.

Best,
Kristian

Great, thanks Dianna - no preference for start time on the 6th, so whatever is best on the NIH side. One thing - please note that my last name is "Andersen" and not "Anderson" - I don't know if the visit requests need to be updated because of that?

set things up so offsite participants see the venue as it is rather than as a 'window', and can ask questions directly at the end of the talk).

Dianne can also contact Dr. Andersen for his title so that posters can be made and displayed prior to the event.

Let me know!

Best,

Lee

Hi Eric,

With those dates, either Oct. 5 or Oct. 6 are open on my calendar, but then the rest of October is out. Other than that, the first two weeks of November are also open on my calendar, but then everything gets pushed into February because of (likely…) grant deadlines.

Best,
Kristian

Thanks, Lee, and Eric, it's great to be in touch. I have a travel budget I can use for this, so no worries there - I agree that an in-person talk makes more sense.

Those dates work for me.

Cheers,
Kristian

>
> Kristian, by way of introduction, I just spoke with Eric Freed co-chair of the NIH Virology Interest Group-I'm sure you know each other from the world of virology if not personally?
>
> Will let you and Eric work out details, including logistics. I understand the Virology Interest Group doesn't have a travel budget since COVID when they switched to virtual meetings. While that is a possibility as well, and I can arrange a venue at which live people will watch a real talk and have real interactions during the Q and A, my own preference would be to have you here in person—there is value to the NIH scientific community in that, I think; and I believe it would be more enjoyable and intellectually profitable for you as a real visit. So let's make sure that option stays open, and I can discuss further with Eric logistics associated with that, and the actual seminar.
>
> Eric, with all that in mind, I will await word

from you, and am happy to arrange through my office the on-the-ground logistics (venue, local transportation, announcement postings, etc). If you and Kristian come up with other dates, please know that late September early October (9/28-10/6) is what works for me; I was planning to attend the Ras meeting 10/7-9 in Frederick after that, but could miss a half-day of that meeting if necessary, and then after that my only scheduled commitment is SfN meeting 11/14-11/18.

Best to you both,

Lee

Hi Lee,

I have a very tight schedule Aug > Oct, but let's see if we can potentially find some time in September. We have our annual NIAID SysBio meeting here in San Diego Sep. 21-23, but later that week could work and the one following. After that, everything closes up until November.

Cheers,
Kristian

NIH
Hi Lee,

It's great to hear from you and thanks for reaching out - and, yes, I'd be more than happy to pop by campus and give a scientific talk on what we have learned about this topic so far, and what still remains to be solved.

Best,
Kristian

On Mon, Jul 6, 2026, at 13:57, Eiden, Lee (NIH/NIMH) [E] wrote:

> Dear Kristian,
>
> We very much appreciated your remote appearance at the counter-programming* to Matt Ridley's talk here at NIH on March 20th, and some of us associated with the 27UNIHted-associated NIH Vigils wondered if you would be willing to accept an invitation to speak on campus on the topic of zoonosis and viral emergence sometime in the coming months. I

am in the process of convincing our Virology Interest Group to sponsor the talk, but wanted to get a general indication of interest from you simultaneously.

Ridley's talk made it obvious that further exploration of the topic here on campus is required so this important public health concern proceeds along more productive lines, at NIH, than those opened up by the Inaugural Scientific Freedom lecture on March 20th. The request is not to riposte—want to be clear on that--but to demonstrate that, as a case history, COVID shows we need to sort ourselves out scientifically to be facing in the right direction when the next virus emerges.

So if you might be interested, I think it would be fun and very appreciated here. Let me know if

you perhaps would like a bit more background-I can send a zoomvite or just give me a call: (b)(6).

Thanks, and best of luck with your work!

Lee E.
